

## **The iPhone just turned into a full-blown DJ setup**

7<sup>th</sup> March 2011, Bucharest, Romania

Xylio is pleased to announce the release of Future DJ, its first handheld DJ solution for the iPhone and iPod touch. DJ software has been Xylio's main focus since 2003, Future DJ being the result of the company's experience and dedication for pro DJ mixing software.

Future DJ brings to the mobile platform features that will have anybody mixing like a pro in no time.

Future DJ is the first iPhone/iPod touch app of its kind that is able to automatically analyze a track's BPM, as well as instantaneously synchronize the beats of two songs at the touch of a button. Future DJ is also the only DJ app that lets you make seamless loops, no matter what size your loop is.

Effects, equalizers, scratch, disk spin and reverse-play are some of the other features that you will find in this app. The song's speed can be controlled through the pitch slider, thus being able to manually mix by bringing both songs to the same BPM.

Users will be able to mix at the touch of a button through the automatic Mix feature, which automatically brings the two songs at the same BPM, while at the same time seamlessly moving the crossfader to the other song.

Future DJ doesn't just bring features from the desktop to the mobile iOS platform. We also use the iPhone/iPod to create distinctive features. One of these is MotionPlaying™, a feature that uses the iPhone's gyroscope to play, pause, scratch, slow down and speed up a track simply through the motion applied to the device.

### **Supported Languages**

US English

### **System Requirements**

iPhone, iPod touch, iPad running iOS 4.1 or later

### **Pricing and Availability**

Future DJ is only \$1.99 / 1,59€ / £1.19 / ¥230 on the iTunes App Store in the Music category.

Screenshots, videos and features list at: <http://future.dj> (press kit available)

### **About Xylio**

XYLIO is a software company specialized in multimedia software development – audio and video – involving Digital Signal Processing (DSP) and real-time programming on the PC, Mac and iOS platforms. The company has extensive experience in the DJ and audio fields, but also developing other multimedia products, including highly interactive kiosk and video products.
